

MEET

las vegas

A UNIQUE EVENT AND MEETING VENUE.

Technical Summary

MEET Las Vegas is engineered to expand the limits of your event – in every possible way. To “meet and exceed” even the most technologically complex events, we have spared no expense integrating and supporting the key elements of today’s event technologies.

Network Infrastructure and Security

- Our Fiber optic backbone between Cisco switch stacks allows for maximum data transfers, ensuring that those who take advantage of our easily customizable network options realize their full potential.
- Our state-of-the-art network infrastructure presents our security-conscious guests with the peace of mind that comes with knowing your data and event interactions are closely guarded.
- Event Internet Bandwidth services are available up to 100Mbps and beyond if necessary. We are on net with the downtown fiber ring allowing us to offer media-driven organizations the high-end services they depend on.
- Wireless is modern connectivity; as such we have included in our infrastructure Wireless Managers and Network Access Control. This includes options for all major modes of authentication and mobility without losing sight of system security.

Audio Visual

- A/V and networking Connectivity Plates are built-in every 10 feet on the first floor – this way there’s no need for unsightly and unsafe cabling across floor space.
- Gigabit speed transport of high-resolution imagery to LCD screens and monitors throughout the facility augments the branding goals of the MEET building.
- Universal plug-and-work capability, from laptops and Media Players to DVD and high-definition media and beyond, your content can be used to the fullest impact.
- Customizable digital signage opportunities are available throughout the interior space.
- VoiceOverIP and Analog phone services are available anywhere in the building.
- Constant attention to development is a must. If we don’t already provide for a technical demand, we can augment to fill the need.

To book your event, or for more information, contact the MEET Sales Team at salesteam@meetlv.com or call 702-734-6338.

Technical Summary Continued

In-house Services and Support

- Uniquely customizable interior lighting elements on the first floor can be used to expand on the existing Martin Cyclo fixtures. These fixtures cut down dramatically on lighting design requirements allowing more room in the budget for experiential design.
- Our expertly integrated Executive Board Room includes all the traditional audio and visual meeting tools as well as HD Tandberg video conferencing equipment.
- Remote webcasting capabilities for presentations offer maximum exposure during real world events.
- On-site IT staff ensure efficient operations and that your event is supported by those most knowledgeable of our infrastructure.
- VoiceOverIP and Analog phone services are available anywhere in the building.
- Constant attention to development is a must. If we don't already provide for a technical demand, we can augment to fill the need.

“ Everyone should come here to hold their events and see the latest and greatest technology! We're excited to have the opportunity to partner with MEET. ”

—Deb Carmachel
Vice President|General Manager
